

AIRBOSS 300 SPRAY SYSTEM

QUICKSTART GUIDE

1. Make sure your engine is topped up with oil. If the oil isn't topped up, there is a risk of the engine shutting down as it has an oil sensor alert system to prevent the engine from seizing up.
2. Fill your engine with premium gasoline. Fill your spray system tank halfway with water to prepare for a water test. Start your spray system up so the unit removes all air and creates complete prime. Run it this way for 2 to 3 minutes to make sure everything is running smoothly.
3. Put your unit in spray mode and test by spraying with your spray wand.
4. Remove all water from the tank and now fill your tank with sealer.
